HESS ~ WE DESIGN CITIES

Thanks to an extremely varied range of luminaires, Hess is able to fulfil every lighting design requirement in outdoor public spaces, as well as illuminating buildings both inside and out. Perfectly matching, high-quality street and site furnishings complete the product portfolio.

Light and form are part of our company name, and thus firmly anchored in our corporate philosophy and our very genes. Hess stands for the very best lighting solutions and an unparalleled expression of design. The combination of light and form is what makes our products unique.

Combining lighting and furnishings to optimum effect allows **integrated concepts** and **special customised solutions** to be implemented across urban and outdoor spaces in line with our slogan „Designing cities“.

Hess is a leading international brand built on a **design-led blend of innovation and tradition**. We support and assist architects, planners, cities, municipalities and building owners from the planning stage through to installation – throughout Europe and beyond.

With the main factory located in Villingen-Schwenningen (Germany), there are also manufacturing operations in Gaffney, South Carolina (USA). Hess has been a subsidiary of the Nordeon Group since 1 October 2013.

Our focus on high-quality materials, traditional craftsmanship and independent stylistic elements results in designs of distinction, day after day. Uniquely made by Hess.

PERFECT LIGHTING

Lighting provides security, helps people to find their way and creates atmosphere. Light also promotes a sense of well-being.

These days, lighting is a key factor when it comes to improving people's living environments and quality of life. Lighting allows cities, towns and communities to differentiate themselves and to enhance their attractiveness.

Building on decades of experience and expertise, we provide lighting for any purpose, occasion and place.

The very best lighting.

Lighting by Hess.

LIGHT AND TECHNOLOGY

Hess delivers efficiency in the most attractive form. LED luminaires by Hess **consume less power** and thereby reduce CO₂ emissions along with energy costs. Economy is also considerably improved by the long service life of products and low maintenance expense.

We are able to achieve the desired lighting result through ingenious design and **optimum optical light control**.

Hess LED products are state of the art, offering low glare and good thermal management. We have also separated LED technology from optical light control. This allows luminaires to be effortlessly upgraded to meet the latest technical standards, while simultaneously keeping costs and effort low. It also takes into account the very short cycles of innovation associated with LED illuminants.

Our optimised reflector technology supports **conventional luminaires** and energy-efficient operation.

Hess provides lighting to suit every situation and requirement. The very best lighting.

LEVO

From streets to squares, from illuminating columns to pole top mounted or bracket mounted luminaires – by deploying special lenses and arranging LEDs in multiple configurations, the LEVO module is highly flexible and complies with a range of lighting classes.

XICATO

XICATO is a high-performance LED module. The special remote phosphor technology behind it ensures superior characteristics, such as very high colour fidelity, for example, throughout the product's service life. Superior colour rendering is a distinctive feature here, with a colour rendering index (CRI) of 80+.

LEVO Q

High-performance cluster LEDs on an interchangeable carrier. The reflector and prismatic glass are separate components which distribute and direct the light in an even, precise and glare-free way.

RAP MODULE

The RAP module from OSRAM combines pioneering LED technology with forward-looking lighting to meet the highest standards. Hess luminaires combined with the OSRAM LED module are ideal for a host of lighting requirements on streets, squares and pedestrian crossings.

cLED EASY

LED retrofit modules for heritage luminaires. Thanks to the bulb optics and warm light colour, these modules fit harmoniously into historic Old Town districts and make it easy to replace the mercury-vapour lamps, which are often still in use. Heritage lighting made by other manufacturers can also be converted using cLED easy.

Facet element

LIGHT BEAM IMAGE SPLITTING

GLARE ° FREE

High illumination levels almost without glare are made possible by the principle of **light beam image splitting**. Light from one or more floodlights is directed onto a mirrored surface containing many individual mirror facets. The mirrored surface acts as a secondary reflector and distributes light onto the area for illumination very evenly and in a targeted way.

MULTI ° FACETED

In order to illuminate a street or square to perfection, mirrored surfaces are fitted with **various facet shapes**. Similar facet shapes can also be used in different ways to focus light onto the mirrored area.

BRILLIANT

The fronts of special plastic facet are metallised using **pure aluminium**. As a result, the light does not need to pass through diffuse plastic. This increases efficiency and the precision of light direction. A multi-layer protective seal gives the mirrored surface its rugged quality.

CUSTOMISED

VEDO and FARO luminaires make **customised solutions** possible in various lighting situations – from small or large squares to combined square and street lighting, as well as illumination for roads and footpaths. Additional illumination is available for building facades.

DIFFERENT BY DESIGN

For atmosphere, structure and illumination. From arcades to squares and water features. Our illuminating strips and tiles help to create atmosphere, provide structure and produce impressive illuminations. **Areas** can be clearly differentiated with their **own structure** and **design characteristics**.

IDEAL SOLUTION

A suitable set for every type of building. Different kinds of buildings require different illumination solutions, which may be either horizontal or vertical in alignment. Hess provides the ideal solution for **illuminating** and **accentuating** any building.

SCOPE FOR CREATIVITY

LEDs open up a **wider range of creative options** when it comes to architectural lighting. Small, efficient, long-lasting and requiring virtually zero maintenance, they are available in various shades of white or controllable colour.

Hess LED lighting effects are more than just a decorative element.

LEDIA LL

HESS SHOWPLACES ~ NOTHING IS MORE COMPELLING THAN REALITY

We are well aware that paper is a forgiving medium.
That is why our two sites in Villingen and Gaffney both include a showplace.

These locations bring lighting to life. Prepare to be inspired
by the design, quality and diversity of our luminaires and site furnishings.

We look forward to welcoming you.

Hess showplaces – bringing light to life

VAREDO Street lighting

PERFECT COMBINATION

Luminaires and site furnishings

By combining luminaires and site furnishings in the ideal way, we facilitate integrated solutions and a holistic approach to the design of urban spaces.

Our customised solutions are perfect for creating individual looks.

Hess. Integrated. Customised.

SERA Street lighting

VAREDO Bicycle rack

STYLE ELEMENTS

Hess products are unparalleled in terms of their expression of design, look and feel.

We work closely with **selected designers** to develop luminaires and street and site furnishings for creating urban spaces. Our luminaires and site furnishings last for decades.

Hess products are able to withstand even the toughest conditions for long periods of time. Because we select and work with **high-quality materials**, our products have a typical Hess look featuring an unparalleled finish.

Sophisticated processing techniques ensure the best possible resistance to weather conditions and corrosion. Comprehensive product families are available in a range of different sizes, offering the perfect solution for any application. Ideal form, ideal proportions.

Hess. Exclusive design and quality.

HESS. A FULL°SERVICE, CONTEMPORARY PROVIDER

Hess is a **turnkey solution provider**, delivering the perfect combination of luminaires and suitable site furnishings for designing urban spaces.

Efficient lighting solutions stem from an integrated lighting design process. Our specialists assist with the necessary lighting calculations and are able to advise on choosing the right illuminant, reflector and control system for both outdoor and indoor applications.

Using our proprietary optical systems we will divert light to where you want it and to where it is needed. Precisely and effectively.

We are your expert, one-stop partner for all lighting solutions.
Hess. From the planning stage through to implementation.
From idea to finished product.

Hess. Customer focus par excellence.

HESS COMBINES FORM AND FUNCTION ~ WITH CITY ELEMENTS

City Elements offer architects and urban planners a comprehensive lighting system to answer virtually every lighting need and more.

Because the **individual elements** can be **combined** as desired, the system **enables** a variety of **supply options**. Solutions include water supply, CCTV cameras and other inner-city requirements. The supply of power is, of course, a further possibility to meet the rising demand for e-mobility.

With two different column diameters and variable heights up to 9 m, City Elements work with existing proportions and fit perfectly into the urban environment.

CITY ELEMENTS EVOKE EMOTION

The ability to **customise** the **colour scheme** of illuminating columns can intensify emotions. Colour is a powerful design element. Colour adds character and is a truly urban element. Which makes colour a City Element.

Which colour will you choose?

City Elements by Hess. Maximum multi-functionality.

VAREDO ~ BY HESS

In the shape of VAREDO, we have created an entirely new generation of luminaires and site furnishings. A generation of solutions that gives landscape architects and lighting designers maximum freedom when arranging urban spaces.

A wide array of products within the same family and a host of different materials are available, but always with a high-quality appearance and feel. Further benefits include quality craftsmanship and a compelling design idiom. This is VAREDO.

From outdoor lighting and illuminating or barrier bollards to benches and waste receptacles: prepare to be inspired by VAREDO.

SOPHISTICATED LIGHTING CONCEPTS FOR BUILDINGS AND THE SURROUNDING AREAS

AVANGARDO 2 offers diversity in form, material and function.

The technology behind the Avangardo 2 collection has been further developed to give lighting designers, urban planners and architects **15 different luminaire families** to choose from in a range of high-quality treated surfaces. The special feature is that each luminaire family is comprised of several product groups – ranging from in-ground and wall luminaires to illuminating bollards – in an integrated and holistic design.

Value retention, durability and reliability are further key features. We use only the highest quality materials for our Avangardo luminaires, such as steel, aluminium and cast aluminium combined with borosilicate, polyacrylic or single-pane tempered safety glass.

Predestined for integrated lighting concepts.

A newcomer with lots of experience

Nordeon's history starts way more than 100 years ago and at the same time in 2012.

The Nordeon Group – a young name in the lighting industry. Well-established. Agile with the strength of an “established newcomer”.

- 7 manufacturing locations
- approx. 1000 employees
- way more than a century of experience

The lighting industry is undergoing intense change. Demand for energy efficiency is rising all the time, with efficient LED luminaires advancing in leaps and bounds. The Nordeon Group is helping to drive this development, while at the same time striving to conserve resources and advocating the use of energy-efficient LED lighting.

A proven track record

Nordeon became established in Springe, Germany, following the takeover of the production facility there from Philips in 2012. The Nordeon Group now brings together the high level of expertise and strong reputation of former Philips sites in Springe (Germany), Chalon-sur-Saône and Dijon (both in France) with two influential, established German companies specialising in outdoor lighting: Vulkan of Springe and Hess of Villingen.

Since March 2015, the Italian company Griven, located in Castel Goffredo, a leading enterprise in the growth market of architectural lighting, is part of the group of companies. And finally, since February 2016, the premium German indoor lighting company WILA is part of the Nordeon Group – an important step for us and our customers.

Launched in April 2013, InstallerDirect.com is a highly innovative new venture – an online wholesale platform for lighting and lighting-related products aimed exclusively at installers.

All in all, the Nordeon Group presents way more than one century of experience.

You can rely on us.

ARINI . Lightingsystem

ARINI: Light, multifunction and design – and inspired by nature

Light, multifunction and design: Three elements that we have combined in a unique lighting system – and which was inspired by nature. The flowing and soft contours of ARINI are drawn by nature – in this way, the harmonious and consistent lines of the parrot are found again in ARINI.

Due to its high flexibility, the ARINI is particularly suitable for various applications and lighting solutions. With its multifunctionality ARINI ensures a high level of security, communication, networking and attractiveness and therefore a high level of quality of life and stay. ARINI creates spaces and squares that not only exude a feeling of secureness and atmosphere, but embodies these.

ARINI – a successful aesthetical interaction of light, multifunction and design for holistic solution concepts.

ARINI – INSPIRED BY NATURE

Product description: Die-cast aluminium housing. Pointed luminaire head end either out of aluminium or PMMA, partially satin-finished. Equipped with LED module (light colours 3000/4000 K). Optionally illuminated pointed end in RGBW. Optional design with integrated CCTV cameras and loudspeaker system possible. All RAL (classic-unicolour)/HESS-DB+Glimmer. RAL Pearl-Metallic – on request.

Accessories: Hess quality pole, different designs

Equipment: LED up to 60W

Advantages:

- Multifunctional lighting system for holistic solution concepts
- Various light distributions
- Control via DMX and DALI possible

BARCELONA . Pole Bracket Mounted Luminaire

The classic luminaire from Hess can be used with conventional illuminants or the LEVO LED module. The optimised reflector technology ensures a wide distribution of light and allows poles to be spaced far apart.

Product Description: Aluminium housing. Galvanised steel bracket. PMMA enclosure. Choice of any RAL (classic-unifarb), Hess mica or Hess DB finish. Systems with mounting heights above 4500 come with reflector and bowl enclosure. High-quality galvanised steel, stepped Hess pole.

Note: With modular LEVO LED light sources, light colour: 3000, 4000 K.

Options: Electronic switchover for night economy feature. Systems with mounting heights above 3500 come with reflector and bowl enclosure. Safety class II. Flange plate.

Lamp: HIT up to 70W, HST up to 70W, LED LEVO up to ca. 50W

Product Family: Wall mounted luminaires

Advantages:

- Optimum optical light control thanks to three-phase reflector made of ultra-pure aluminium
- Classic style elements also available with LED equipment
- Wall-mounted option also available

NOVARA ML

Product Information
www.hess.eu/1320

NOVARA ML . Luminaire and Bracket

Public spaces and buildings need lighting concepts that are both functional and attractive at the same time. The NOVARA series of luminaires is the perfect solution. The wall luminaires, bollards with one or two luminaires and bracket-mounted luminaires provide planners with enough models for various lighting situations.

Product Description: Die-cast aluminium luminaire housing. Hinged, clear single-pane tempered safety glass enclosure opens without tools for easy maintenance. Stainless steel braided cable tube. Luminaire tilt adjusts to 0°, 15°, 30°. Galvanised steel bracket. Choice of any RAL (classic-unifarb), Hess mica or Hess DB fin sh. Available with conventional lamps or modular LEVO LED sources with 3000, 4000 K.

Separate order: Round high-quality Hess pole fabricated from galvanised steel. Pole fits decoratively off-set from pole.

Options: Safety class II. Flange plate.

Lamp: HIT up to 70W, TC-T/TEL up to 42W, LED LEVO up to ca. 50W

Product Family: Illuminating Bollards, Catenary suspended luminaires, Wall mounted luminaires

Advantages:

- Classic, triangular, cooling fin design
- Extended luminaire family for varying lighting situations
- Luminaire head allows incremental panning
- Special surface structure to minimise contamination

CITY ELEMENTS

Product Information
www.hess.eu/3400

CITY ELEMENTS 230

Hess columnar lighting system with top, base and, if required, intermediate extension elements. Luminaire features round aluminium section with 230-mm diameter, maximum height of 9m. All elements horizontally pivot through 360°. Choice of any RAL, Hess mica or Hess DB fin sh.

CITY ELEMENTS 180

Hess columnar lighting system with top, base and, if required, intermediate extension elements. Constructed from 180-mm round aluminium section for a maximum length of 6000 mm and a maximum total wattage of 300 W. All elements horizontally pivot through 360°. HESS will calculate the embedded base length for you.

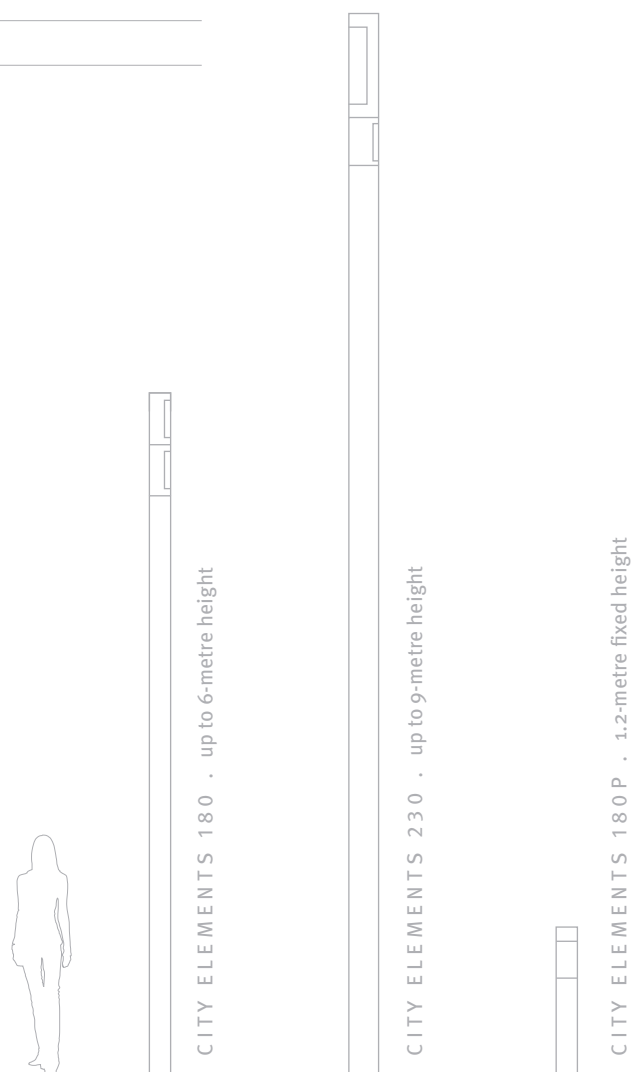

CITY ELEMENTS

VARYING POLE DIAMETERS AND HEIGHTS

The more slender version for local streets comes with a diameter of 180 mm. The thicker variant with 230 mm for heights up to 9 metre is ideal for plazas and pedestrian zones. With two different diameters, the best suiting proportion is readily available for nearly every application in public spaces.

For a total height of 3500 mm, the embedded base's required length is 600 mm. If the total height is between 3500 and 6000 mm, a 800-mm embedded base is necessary. Heights between 6000 and 8000 require embedded bases with 1000-mm length, and 8000- to 10,000-mm high columns should have 1200-mm long embedded bases. For other column heights, use the City Elements Configurator to determine the appropriate embedded base length.

Maximum total wattage is 300 W

LIGHT BEAM IMAGE SPLITTING

.hess

FARO 720

FARO 960

Product Information
www.hess.eu/2001

FARO . Light beam image splitting

The FARO family of luminaires is ideal for the indirect and glare-free lighting of squares or pedestrian zones and creating a particular ambience. The individual mirror facets on the pole-mounted luminaire and the catenary suspended luminaire are illuminated from below and reflect the light, producing a homogeneous spread of light.

Product Description: Specially designed for glare-free symmetric indirect lighting. Canopy constructed from aluminium. Secondary reflector comprised of individual facets, which are manufactured of special-purpose plastic. Facet front surfaces are metallised with super purity aluminium and treated with double protective coat. Galvanised steel luminaire construction. Tapered pole and embedded base are fabricated from galvanised steel. Choice of any RAL (uni-classic), Hess mica or Hess DB finish.

Options: Safety class II. Flange plate.

Lamp: HIT up to 150W, LED up to ca. 55W

Product Family: Catenary suspended luminaires, Wall mounted luminaires

Advantages:

- Brilliant optical light control and efficiency thanks to high-quality secondary reflector
- Almost glare-free lighting, even for high illumination levels
- Modern design

VEDO DP . Light beam image splitting

The VEDO luminaire has a secondary reflector, metallised with pure aluminium and illuminated from below, which allows light to be optimally and precisely directed and distributed. This is pleasantly glare-free even when using high illumination levels.

Product Description: Aluminium canopy construction. Cast aluminium luminaire housing. Comes with area facets. Secondary reflector comprised of individual facets, which are manufactured of special-purpose plastic. Facet front surfaces are metallised with super purity aluminium and treated with double protective coat. Primary unit configurable with one lamp. Tapered, galvanised steel pole with integral embedded base. Choice of any RAL (uni-classic), Hess mica or Hess DB fin sh.

Options: Safety class II. Flange plate.

Lamp: HIT up to 3x 150W

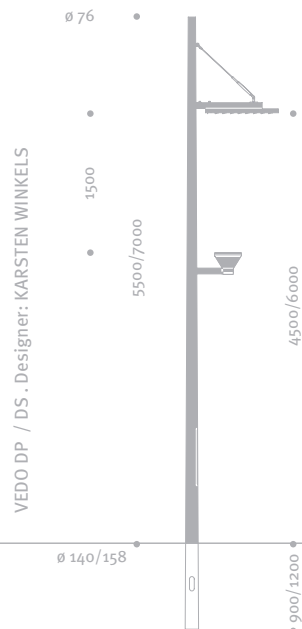

Advantages:

- Brilliant optical light control and efficiency thanks to high-quality secondary reflector
- Almost glare-free lighting, even for high illumination levels
- Particularly suitable for squares and parking spaces

RESIDENZA U RESIDENZA UM RESIDENZA UL

Product Information
www.hess.eu/4010

RESIDENZA U . Catenary Suspended Luminaire

Catenary suspended, pole top-mounted or wall luminaire: The RESIDENZA model with cylindrical luminaire head made from polymethyl methacrylate is available in many different designs, paving the way for integrated design concepts for urban areas.

Product Description: Cast aluminium housing. Includes attachment mechanism for a suspension cable provided by others. Clear PMMA enclosure. Rotationally symmetric reflector, constructed from anodised aluminium and specially designed to reduce upward reflected light. Tool-less opening and maintenance. Choice of any RAL (classic-unifarb), Hess mica or Hess DB finish.

Options: Ring reflector for increased pedestrian visual comfort. Safety class II. Socket.

Lamp: HIE up to 70W, HIT up to 70W, HSE up to 70W

Product Family: Outdoor lighting, Illuminating columns, Wall mounted luminaires

Advantages:

- Elegant modern design
- Highly suitable for city centres
- Opening and maintenance of the luminaire without tools

ARCUS . Recessed Wall Luminaire

Designed to effectively present staircases, footpaths and passages for pedestrians and vehicles, the compact square flush- and surface-mounted wall luminaires of the ARCUS family emphasise the architectonic features of these areas. The single-pane tempered safety glass on the luminaire enclosure is available in a variety of different surfaces.

Product Description: Designed for glare-free lighting. Aluminium luminaire housing. Translucent (inner matt finish), single-pane, tempered safety glass enclosure. Available in various glass surface finishes. Powder coated, stainless steel frame. Aluminium installation sleeve. Available with LED or conventional light sources. Choice of any RAL (classic-unifarb), Hess mica or Hess DB finish.

Separate order: Aluminium installation sleeve.

Lamp: TC-D/DEL up to 26W, LED up to ca. 13W

Advantages:

- Effective presentation of staircases, foot paths, and passages for pedestrians and vehicles
- Optional LED or conventional equipment
- Can be used as illuminating tile in tiled walls

PONTE

Produktinformationen
www.hess.eu/7300

PONTE . Illuminating Bollard

PONTE. One illuminating bollard - two options. With its two light outlets, the PONTE illuminating bollard is truly multitasking. As its luminaire head is rotatable by 360 degrees, it is perfectly suited to illuminate bushes, trees and façades. Here, the area to be illuminated can be specified exactly using the integrated variably pivotable louvred reflector. The side light outlet ensures an ambient light at ground level making it ideal for footpaths and driveway installations. The slightly conical shape of the PONTE, together with the wing of the second light outlet attached at the side, result in a most interesting and elegant illuminating bollard.

Product Description: Cast aluminium housing with galvanised steel embedded base. Top and side PMMA-covered apertures. Upper housing with aperture rotates 360°. The top cover is clear and the side cover grooved. Choice of RAL, mica or DB finish. Specular finished louvres feature through-adjustment.

Options: Protection rating II. Flange plate.

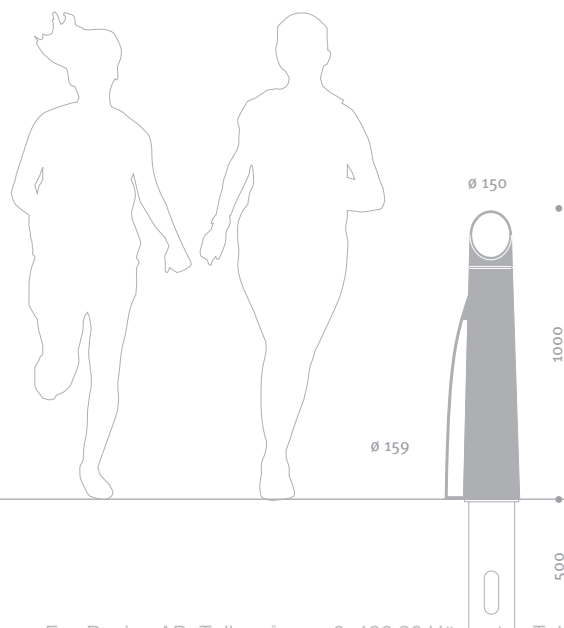

Lamp: HIPAR 35W and T16 24W

PARMA

Product Information
www.hess.eu/7040

PARMA . Illuminating Bollard

The highly varied models of the PARMA product family are a modern interpretation of classic torch lights. The eye is caught by the tapered, satin-finish luminaire glass on a conical bollard made from lacquered cast aluminium. They are ideal for effective outdoor lighting. The PARMA product family can, for example, produce a consistent lighting solution for green spaces.

Product Description: Aluminium and translucent PMMA luminaire construction. Tapered, cast aluminium bollard construction. Available with LED or conventional light sources. Choice of any RAL (classic-unifarb), Hess mica or Hess DB finish. Flange plate for base surface attachment.

Options: RAL, soft, mica or other DB finish. Separate, galvanised steel embedded base.

Lamp: TC-D/DEL up to 26W, LED up to ca. 13W

Product Family: Outdoor lighting, Wall mounted luminaires

Advantages:

- Hess maintenance concept ensures particularly easy maintenance
- Cover made of impact resistant PMMA
- The PARMA product family makes integrated lighting solutions possible

AMALFI

Product Information
www.hess.eu/7060

AMALFI . Illuminating Bollard

These are real gems for entrances, passages and historically unique buildings. The Amalfi Illuminating bollard is designed as a torch light with luminaire shade, proving that modern LED technology and nostalgic design can be a perfect match.

Product Description: Aluminium luminaire housing. Borosilicate glass enclosure. Aluminium canopy. Canopy underside functions as reflector. Tapered, cast aluminium bollard construction. Available with LED sources or conventional lamps. Choice of any RAL (uni-classic), Hess mica or Hess DB fin sh. Flange plate for base surface attachment.

Options: RAL, soft, mica or other DB fin sh. Separate, galvanised steel embedded base with cable opening.

Lamp: QR-CB up to 35W, LED up to ca. 13W

Product Family: Outdoor lighting, Wall mounted luminaires

Advantages:

- High-quality aluminium luminaire shade, underside serves as reflector
- Pleasant lighting effect thanks to low glare
- The AMALFI product family makes integrated lighting solutions possible

TOLEDO

Product Information
www.hess.eu/7410

TOLEDO . Illuminating Bollard

A cylindrical luminaire enclosure, which also serves as a reflector, lends a classic design to the TOLEDO luminaire model. On request, it can be fitted with LED modules or standard illuminants. Also available as a wall luminaire or illuminating bollard, it effectively highlights pedestrian zones, footpaths or parks.

Product Description: Galvanised steel construction with aluminium top cover. Integral embedded base. Clear PMMA enclosure. Interior fitted louvers. Access door for maintenance and service. Choice of any RAL (uni-classic), Hess mica or Hess DB finish.

Options: Safety class II. Flange plate. Houseside shield with inner specular finish. Night economy feature (HSE).

Lamp: HIE up to 70W, HSE up to 70W

Product Family: Wall mounted luminaires, Outdoor lighting

Advantages:

- Internal lamellar reflector to avoid glare
- Cover made of impact resistant PMMA
- The TOLEDO product family makes integrated lighting solutions possible

MADRID

Product Information
www.hess.eu/7400

MADRID . Illuminating Bollard

The elegant MADRID luminaire is available in a large number of model variants and can be fitted with LEDs (LEVO or 360/270 module technology) or conventional illuminants. A mini aluminium reflector ensures that the area to be illuminated is faded out homogeneously and without glare.

Product Description: Galvanised steel construction with aluminium top cover. Access door for maintenance and service. Clear PMMA enclosure and interior fitted louvres. Integral embedded base. Choice of any RAL (classic-unifarb), Hess mica or Hess DB finish.

Options: Electronic switchover night economy feature (HSE only). Safety class II. Flange plate.

Lamp: HIE up to 70W, HSE up to 70W

Product Family: Wall mounted luminaires, Outdoor lighting

Advantages:

- Recessed lamellar reflector to avoid glare
- Cover made of impact resistant PMMA
- The MADRID product family makes integrated lighting solutions possible

LEDIA LL

Product Information
www.hess.eu/8011

LEDIA LL . Illuminating Strip

The bar-shaped LEDIA LL illuminating strips create impressive lighting effects. The strips are available in various lengths. Thanks to their narrow width of only 28 mm, they can be used for a variety of applications and are ideally suited for indoor, but particularly for outdoor areas, as well as for underwater use and wall installations. Thus fountains, staircases and public as well as private spaces are effectively highlighted. Stringing the LEDIA LL flushly together results in a continuous light band.

Product Description: Galvanised steel luminaire housing. Clear, single-pane tempered safety glass with underside diffusing coat. Millimetre exact height adjustment from 60-140 mm. Available in four lengths. Maintenance-free. Comes with .5 or 1.5 metric tonne rollover capacity. Choice of EL (effects lighting) or RGB (colour changing). Power supply via external power unit installed in sub-distribution provided by others. Electrical cable between power supply unit and first illuminating strip provided by others. Connectors included. Avoid contact with corrosive chemicals, substances and materials.

Note: LED configuration includes EL (lighting effects) with choice of red (624 nm), orange (591 nm), green (527 nm), blue (470 nm), white (6500 K), warm white (3000 K) or RGB = colour changing (R=622 nm, G=530 nm, B=470 nm) with RGB control and power supply provided by others. Only professional electrical contractors are qualified to determine which power supply unit and driver are suitable for your specific system. The draw on the power supply must exceed 50 % of its load capacity.

Options: Power pack.

Lamp: LED EL, LED RGB

Advantages:

- Maintenance-free LED illuminating strip available in various lengths and sizes
- Installation dummy as replacement during the paving
- Floor, wall, and underwater installation
- Rollover capacity of up to 5.0 t

Technical Data: (Variant Details)

Ingress protection: IP67, IP68

LEDIA LF . Illuminating Tile

The LEDIA LF illuminating tile offers a diverse range of possibilities when it comes to creative lighting effects. The LEDIA LF is available in 4 sizes and thus can be employed in a variety of ways. A total of 6 light colours as well as one RGB variant ensure colour-intensive and ambient lighting effects. The illuminating tile is suitable for in-ground outdoor as well as underwater installations.

Product Description: Stainless steel luminaire housing. Single-pane, tempered safety glass enclosure with anti-slip coat. Stainless steel mounting frame for 120-mm installation depth. Available in four sizes to match different paving grid patterns. Maintenance-free. Comes in 1.5- or 5-tonne (metric) rollover capacity. LED configuration: Choice of EL (lighting effects) or RGB (colour changing). Power supply via external power supply unit installed in sub-distribution provided by others. Electrical cable between power supply and first illuminating tile provided by others. Comes with 1-m long cable and connector for connection between illuminating tile and junction compartment inside the mounting frame. Note: Connectors included with LEDIA LF 100 x 100 tiles; cables provided by others. Avoid contact with corrosive chemicals, substances and materials.

Note: LED configuration EL (lighting effects) with choice of red (624 nm), orange (591 nm), green (527 nm), blue (470 nm), white (6500 K), warm white (3000 K). RGB = colour changing (R=622 nm, G=530 nm, B=470 nm) with RGB control provided by others. Note: Colours may vary between EL and RGB. Only professional electrical contractors are qualified to determine which power supply unit and driver are suitable for your specific system. The draw on the power supply must exceed 50 % of its load capacity.

Options: Power pack.

RAVENNA G 110 LED . In-ground Luminaire

Using light to focus on architectonic highlights such as statues or historic buildings requires tailored lighting concepts based on efficient spotlights. The RAVENNA series, which includes variants that can be swivelled in a continuously variable manner, covers this entire range of applications. A recently developed particularly thick coating protects against the effects of the weather.

Product Description: Single-pane, tempered safety glass enclosure with coated inner mask. Enclosure bonded to stainless steel edging. Cast aluminium luminaire housing (Anticorodal) treated with special anti-corrosive coat. Newly developed high-build coating with superior corrosion protection.

Separate order: Installation sleeve for increased rollover capacity.

Note: Rollover capacity increases from 1,5 to 5 t with the use of the installation sleeve.

Options: Concentric-ringed, anti-slip surface. Installation sleeve.

Lamp: LED up to ca. 3W

Advantages:

- High-quality stainless steel housing
- No screws on the top side - easy maintenance thanks to bottom screw terminals
- Rollover capacity of up to 5,0 t

USE, INSTALLATION AND CARE

Hess in-ground luminaires come in two load classes: 1.5 t without installation sleeve, which are only suitable for walk-over applications. 5 t with installation sleeve, which are suitable for applications in which infrequent roll-over may occur. The designation “rollover” means the in-ground luminaires can handle the occasional load (in emergencies) of vehicles passing over them, provided the speed doesn't exceed 20 km/h and the wheel load doesn't exceed 5 t. Turning, braking and acceleration on the in-ground luminaire must be avoided.

The in-ground luminaires are not suitable for immersion in water, i.e. underwater applications. To ensure safe operation, an adequate drainage system must be provided.

In addition, they must be installed no less than 3 mm above the finished ground surface.

The in-ground luminaires surface temperature may reach up to 70°C depending on the lamp.

This is to be taken into account when planning accessible areas.

Electrical installation requires a cable junction box. The in-ground luminaires come equipped with a 2 m connecting cable for connection to a distribution box, e.g. cable junction box (supplied by others).

For added slip protection in wet conditions, special glass plates are available for public areas with special anti-slip application (DIN 51130 R 11-compliant).

Caution! Corrosive chemicals and substances will damage the luminaires. Do not allow the luminaires to come in contact with such agents.

Read the assembly instructions carefully before beginning with installation or maintenance.

GENERAL INFORMATION

All LED pole top and pole bracket luminaires are prewired:

Type of cable: Class I - Ho555-F5G1²

Class II - Ho555-F4X1²

Our special service for you:

We are pleased to take over the project management for the calculation of the statics of your project.

SYMBOLS

With the purchase of Hess luminaires, the customer obtains the assurance of excellent quality and enduring durability. Hess's DIN ISO 9001 certification is evidence of its commitment to providing high quality service and products.

Hess lighting systems comply with national and international safety and protection regulations. The applicable indications are displayed on the rating plates.

Excluding the luminaires with Class III protection rating, all Hess luminaires are designed to operate with 230 V, 50 Hz supply voltage in compliance with DIN-IEC 38.

SAFETY SYMBOLS

ENEC

The ENEC mark (European Norms Electrical Certification) is a European approval and certification marking for lighting fixtures and electrical components used in lighting systems. It certifies that a product complies with currently applicable European standards and signifies that inspection by the respective testing institute has been performed. The ENEC marking appears together with the identification number of the national testing institute and is often displayed with the institute's logo. Every Hess product is CE-compliant. ENEC certificates are available for selected models in the various product families.

CE

The CE marking signifies that the product conforms to all the essential requirements of all relevant EU directives. It is applied to the luminaire, packaging or accompanying documents by the manufacturer or importer. It is not the mark of any particular approval institute.

Fire Protection

Luminaires suitable for mounting on normally combustible surfaces.

Fire Protection

Luminaires not suitable for installation on normally combustible building materials.

Fire Protection

Recessed luminaires not suitable for installation on/in normally combustible building materials. Thermal insulation does not comply with applicable standards.

TECHNICAL SYMBOLS

Minimum distance to illuminated surface

Nominal temperature of cables

High pressure sodium lamp requires an external ignitor.

High pressure sodium lamp requires an internal ignitor.

SAFETY CLASSIFICATIONS

The luminaires are designated in three classes according to the protection they provide against high contact voltage.

Protection rating I: Luminaires in this class have basic electrical insulation and all of their potentially electrically conductive parts are connected to a protective conductor. The protective conductor displays this marking.

Protection rating II: Live parts are fitted with additional insulation. Connection to a protective conductor is not permitted.

Protection rating III: Luminaires in this class operate on safety low voltage (SELV) and require no extra protective measures.

INGRESS PROTECTION SYMBOLS

Enclosed
Ingress protection IP20

Splash water protected
Ingress protection IPX4

Multi-directional nozzle projected water protection
Ingress protection IPX5

Powerful jet and heavy seas projected water protected
Ingress protection IPX6

Watertight (immersible under limited conditions)
Ingress protection IPX7

Submersible (prolonged submersion under pressure)
Ingress protection IPX8

Protection against foreign particles greater than 1 mm
Ingress protection IP4X

Dust protected
Ingress protection IP5X

Dust tight
Ingress protection IP6X

COLOURS AND FINISHES

The information found here about finishes and colours is provided for your convenience. Due to variations in manufacturing and pigments, fluctuations in colour may occasionally occur.

Hess offers the following selection of DB, mica, soft and RAL colours. Additional colours are available upon request.

Hess paints are applied using a state-of-the-art coating process. The colours are the result of multiple coats and closely correspond to the Federal (German) Road and Civil Engineering Research Institute's colour tint chart (BAST). High-quality coating materials from Du Pont are used.
